

Artificial Intelligence:

An Introduction

Mohsen Afsharchi

Strong AI

- An autonomous self-moving machine that **acts** and **reasons** like a human

AI: a brief history

- 1950: Alan Turing. **The Turing test.**
 - Can machines think? → Can we tell it's a machine from conversation?
 - text in / text out
 - demo: A.L.I.C.E. (<http://www.alicebot.org/>)
 - Turing, A.M. (1950). Computing machinery and intelligence. *Mind*, 59, 433-460
 - it also contains things like genetic algorithm, human cloning ...

AI: a brief history

- 1956: Dartmouth summer workshop
 - AI named
 - big players introduced
 - John McCarthy, Marvin Minsky, Claude Shannon, Nathaniel Rochester, Trenchard More, Arthur Samuel, Ray Solomonoff, Oliver Selfridge, Allen Newell, Herbert Simon
 - no consensus

AI: a brief history

- 1952—1969: early enthusiasm: Computers can do X
 - X = solve puzzles, prove geometry theorems, play checker, Lisp, block world, ELIZA, perceptron...
 - but many are **toy problems**

AI: a brief history

- 1966-1973: a dose of reality
 - syntactic without domain knowledge doesn't work
 - The spirit is willing but the flesh is weak
 - The vodka is good but the meat is rotten (US→RU→US)
 - **US gov canceled funding** for machine translation
 - intractability: exponential complexity
 - **British gov ended AI support** based on the Lighthill report
 - theoretic limit: perceptron can't do XOR
 - Neural network **research halted**

AI: a brief history

- 1969-1988: Knowledge-based systems
 - Add domain-specific knowledge to guide search
 - CYC: world = millions of rules. (cyc.com)
 - Expert systems commercialized in the 80's
 - One AI group in every major US company
 - Billions of \$\$\$ industry

AI: a brief history

- 1988 – not long ago: **AI winter**
 - Expert systems
 - Massive investment from venture capitalists
 - Extravagant promises
 - Bubble burst
 - AI funding dried up
 - AI companies down

AI: a brief history

- 1986 – not long ago: neural networks
 - Multi-layer perceptron
 - Back propagation training algorithm rediscovered
 - Connectionists vs.
 - Symbolic models (Newell, Simon)
 - Logician (McCarthy)
 - What it really is: statistical machine learning

AI: a brief history

- present: **statistics**
 - machine learning
 - Hidden Markov models (HMM), support vector machines (SVM), Gaussian processes, graphical models (Bayes networks, conditional random fields)
 - data mining

The Reality

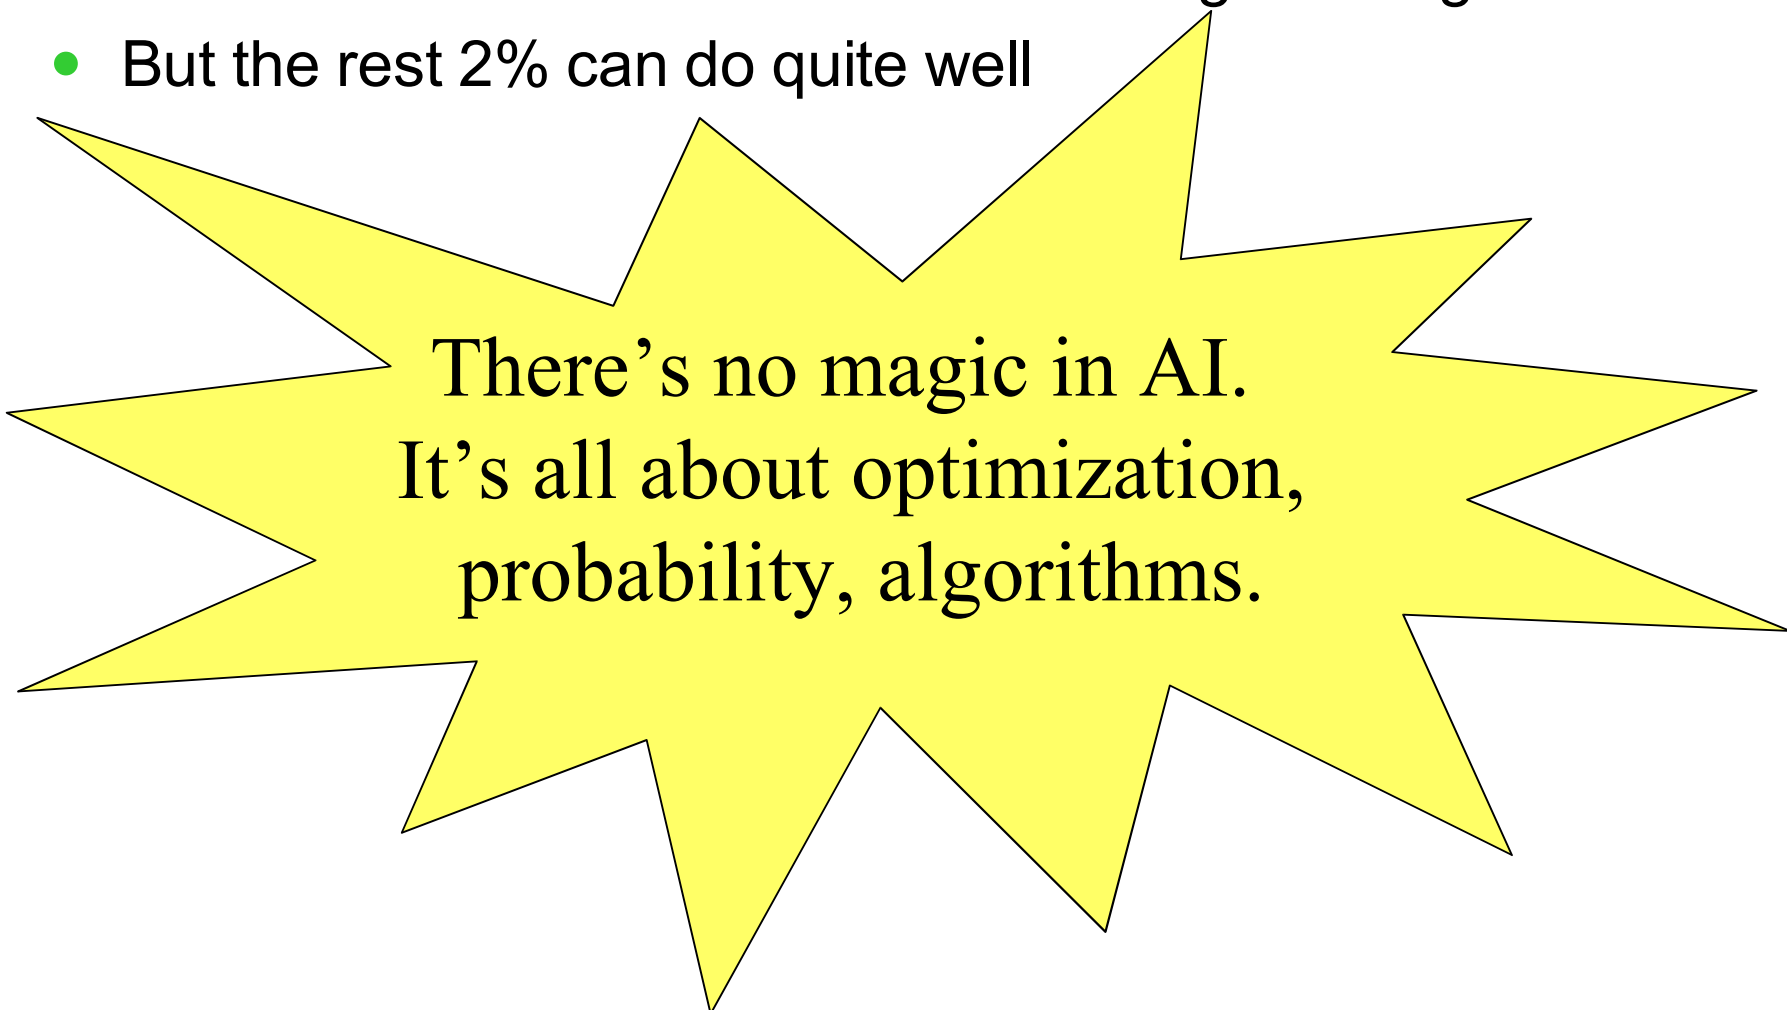

- In the early period of AI it seemed plausible that new forms of **symbolic computation**, e.g., frames and semantic networks, **made much of classical theory obsolete**. This led to a form of **isolationism** in which AI became largely separated from the rest of computer science. This isolationism is currently being abandoned. There is a recognition that **machine learning** should not be isolated from **information theory**, that **uncertain reasoning** should not be isolated from **stochastic modeling**, that **search** should not be isolated from **classical optimization and control**, and that **automated reasoning** should not be isolated from **formal methods**. **David McAllester 1998**

Weak AI

- Machines *can* demonstrate intelligence, but do not necessarily have a **mind**, **mental states** or **consciousness**
- weak AI refers to the use of software to study or accomplish specific problem solving or reasoning tasks that do not encompass the full range of human cognitive abilities.

AI today

- Don't know how to do 98% of the intelligent things
- But the rest 2% can do quite well

There's no magic in AI.
It's all about optimization,
probability, algorithms.

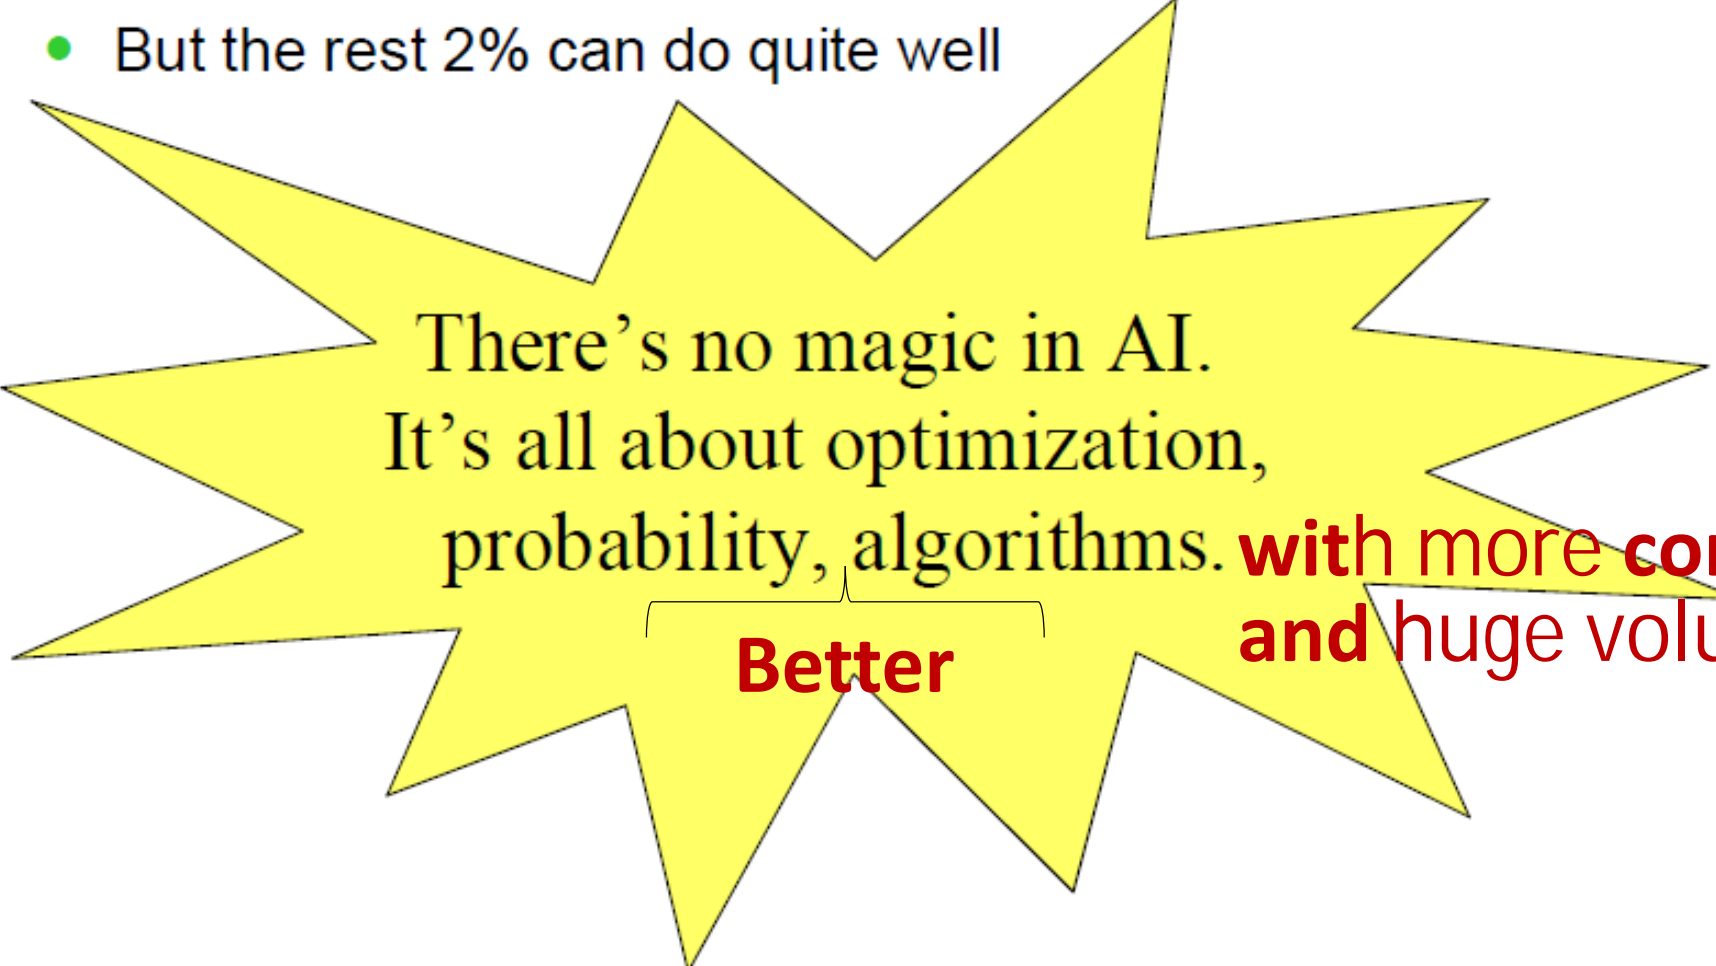

AI-revolutionary change- since 2010

- **More computational power**
 - Graphics processing unit – GPU
 - Clusters
- **Better learning algorithms**
 - Learning data representations;
 - Deep neural networks
 - Deep reinforcement learning

AI Today

- Don't know how to do 98% of the intelligent things
- But the rest 2% can do quite well

There's no magic in AI.
It's all about optimization,
probability, algorithms. **with more computational power
and huge volume of data**

Better

Why is it more important now?

- Flood of available data (especially with the advent of the Internet)
- Increasing computational power
- Growing progress in available algorithms and theory developed by researchers
- Increasing support from industries

AI today: natural language: chatbot

Valerie

Valerie: CMU Robot Receptionist in Newell-Simon hall.

ALICE: 2004 Loebner Prize winner

ELIZA: psychotherapist

Shallow natural language processing, pattern matching

AI today: natural language: speech recognition

- “speak or touch tone your card number” (tiny vocabulary, high accuracy needed)
- call routing: “how can I help you?” (large voc, low acc)
- dictation (large voc, high acc)

IBM
ViaVoice

Dragon
NaturallySpeaking

- Hidden Markov Model, A* search, ...

AI today: natural language: machine translation

The spirit is willing but the flesh is weak. (2005/6/29)

Дух охотно готов но плоть слаба	Spirit is willingly ready but flesh it is weak
精神是愿意的但骨肉是微弱的	The spirit is wants but the flesh and blood is weak
精神は喜んでであるが、肉は弱い	Mind is rejoicing,, but the meat is weak
El alcohol está dispuesto pero la carne es débil	The alcohol is arranged but the meat is weak
الكحول مستعدة غير أنّ اللحم ضعيف.	The alcohol is ready nevertheless the meat is weak.

- IBM statistical machine translation models
- US gov major consumer
 - Why Vodka (Russian)?
 - Now?

AI today: natural language: question answering

The screenshot shows the Ask Jeeves search engine interface. At the top, there are navigation links for Web, Pictures, News, Local (with a 'NEW!' badge), Products, and More. A search bar contains the query 'who is the first US astronaut?' and a 'Search' button. Below the search bar, a red banner displays the search results: 'Web Search: who is the first US astronaut?' and '1-10 results'. The first result is titled 'who is the first US astronaut? [Web Answer]' and provides a snippet: 'The flight of **Alan Shepard, first US astronaut**, lasted only 15 minutes, 22 seconds. Email: myalmanac@angelfire.com... www.angelfire.com/az/myalmanac/page4.htm... | Save | See 5 more Web Answers >>'. A second search result is also visible, titled 'who is the first astronaut? [Web Answer]' with a snippet: 'Rabbi Harold Robinson of the Navy Chaplain Corps recited prayers and poetry in English and Hebrew, mindful that the crew included Israeli Air Force Col. **Ilan Ramon, the first astronaut** from that country. www.chron.com/cs/CDA/story.hts/space/sts... | Save'.

- What happened to Gagarin?
- Shallow natural language processing, heuristics

AI today: game: chess

- IBM Deep Blue vs. Kasparov, 1997/5
- 6 games: K, D, draw, draw, draw, D
- IBM stock up \$18 billion.

- Search, two-player zero-sum discrete finite games with perfect information.

AlphaGo

Brute force search intractable:

1. Search space is huge
2. "Impossible" for computers to evaluate who is winning

Game tree complexity = b^d

AlphaGo

Deep Blue vs AlphaGo

Deep Blue

Handcrafted chess knowledge

Alpha-beta search guided by heuristic evaluation function

200 million positions / second

AlphaGo

Knowledge learned from expert games and self-play

Monte-Carlo search guided by policy and value networks

60,000 positions / second

AI today: WWW: Google news

- Automatically selects / arranges news from multiple sources
- c.f. CNN

- Unsupervised machine learning: clustering

AI today: WWW: ad

- “Sponsored links”
- Show ad based on relevance and money. Big business.

- Online algorithm, game, auction, multiple agents

AI today: WWW: driving directions

- From UW CS to state street

The screenshot shows a Google Maps interface in a Mozilla Firefox browser window. The browser title bar reads "Google Maps - from: 1210 W Dayton St, Madison, WI 53706 to: State St, Madison, WI 53703". The browser address bar shows "http://www.google.com/maps/dir/1210+W+Dayton+St,+Madison,+WI+53706/State+St,+Madison,+WI+53703". The Google Maps interface includes the "Maps" logo, navigation controls, and a satellite view of the city of Madison, WI. A blue line indicates the driving route from the start address to the end address. On the right side, the "Directions" panel provides the following information:

Start address: 1210 W Dayton St
Madison, WI 53706

End address: State St
Madison, WI 53703

Distance: 1.2 mi (about 2 mins)

Reverse directions:

1. Head east from W Dayton St - go 0.5 mi
2. Turn left at N Frances St - go 0.2 mi
3. Turn right at W Gilman St - go 0.3 mi
4. Turn right at N Henry St - go 0.1 mi
5. Turn right at W Gorham St - go 0.1 mi

Below the directions, a disclaimer states: "These directions are for planning purposes only. You may find that construction projects, traffic, or other events may cause road conditions to differ from the map results." At the bottom of the panel, it says "Map data ©2005 NAVTEQ™, Tele Atlas".

- search

AI today: WWW: collaborative filtering

- Recommendation based on other users' behavior
- e.g. Amazon.com

Availability: Usually ships within 24 hours. Ships from and so

Progress

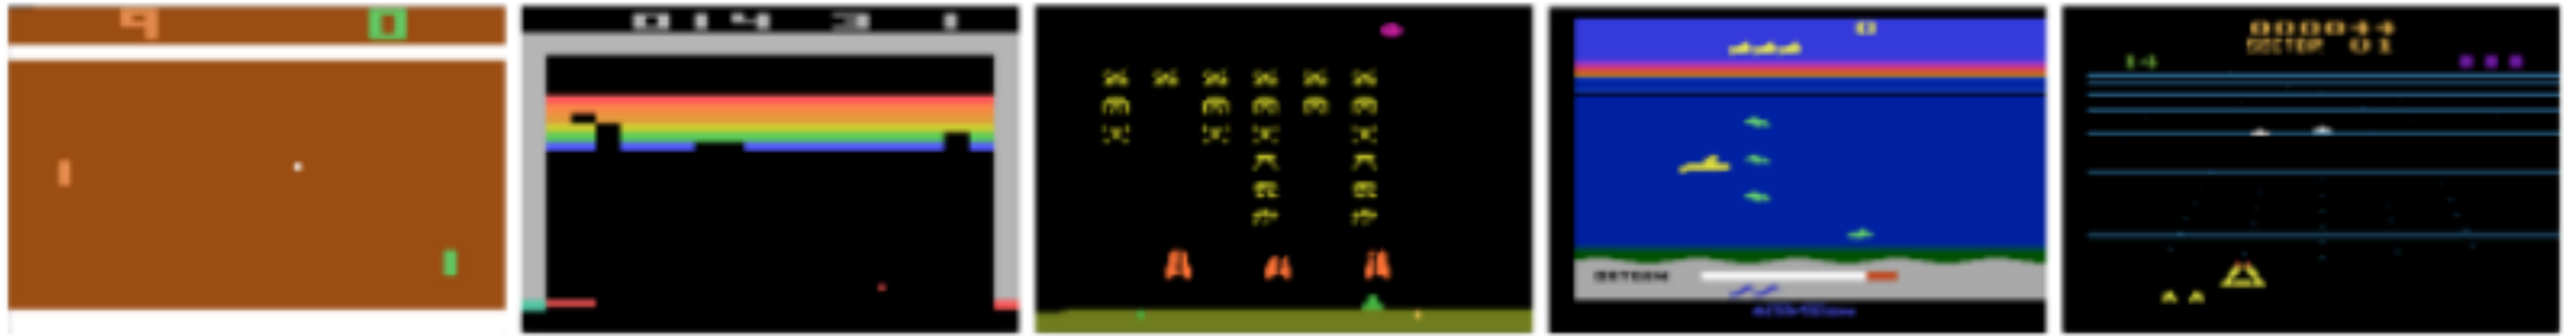

Figure 1: Screen shots from five Atari 2600 Games: (Left-to-right) Pong, Breakout, Space Invaders, Seaquest, Beam Rider

Progress in AI:

- Clear, precise models of a *class of problems*
- Powerful, general-purpose tools
- A clear understanding of what each model and tool can and cannot do

Are these intelligence?

AI defined

- Which one do you like?

	act	think
humanly	e.g. Turing test 1990, 1991	How DO we think? 1985, 1978
rationaly	agent 1998, 1998	Logic 1985, 1992

rational agent

- Sensors can be noisy or missing
- Actuators
 - may change the environment
 - can be inaccurate
- Performance measure
- Rational = optimize the performance measure
 - May not be perfect or even useful
 - e.g. “pick up as much dirt as possible”

How do we think? Mind reading

- Which picture is seen? high accuracy [Cox & Savoy, *Neuroimage* 2003]

Faces

Houses

Chairs

Shoes

[Haxby et al, *Science* 2001]

- Also word meaning, picture vs. sentence, sentence ambiguity [Francisco Pereira, CMU Ph.D. thesis]

Harvest human intelligence:
Captcha and the ESP game

AI is hard

- Some AI problems are very hard
 - Vision, natural language understanding, ...
- “AI-complete”
 - If you solve one, you solve AI
- What do you do?
 - Give up?
 - Bang your head really hard?
 - Important lesson in life:
 - **turn hardness into something useful**
- Very hard for machine, trivial for human

Captcha

- Yahoo!

- Google

Captcha

- The “anti-Turing test”
- Tell human and machines apart, **automatically**
 - Deny spam-bots free email registration
 - Protect online poll from vote-bots
- By asking an “AI-complete” question

- Also audio Captcha, e.g. superimposed speakers
- <http://www.captcha.net/>

The ESP game

- Real intelligence is here (for now)
- We waste it in computer games, anyway
- Harvest it (<http://www.espgame.org/>)

The ESP game

- Task: label all images on the web with words

→ car, boy, hat, ...

- Why: current image search engines
 - use the image filename and surrounding text
 - do not really understand the image
- How: two separate players try to find a common description of the image.

The ESP game

PLAYER 1

GUESSING: CAR
GUESSING: HAT
GUESSING: KID
SUCCESS!
YOU AGREE ON CAR

PLAYER 2

GUESSING: BOY
GUESSING: CAR
SUCCESS!
YOU AGREE ON CAR

0:46
Time Left

The ESP Game

0220
score

Taboo Words
HAT
SUNGLASSES

Your Guesses
MAN
PERSON
GUY
